A PERFECT ALLIANCE.

ODU AMC[®] HIGH-DENSITY

Ruggedized miniature circular connector

BREAK-AWAY
SCREW-LOCK

ODU AMC® HIGH-DENSITY

FEATURES

- High contact-density connector
- High-speed data transfer capability, including:
 - USB® 3.2 Gen 1x1
 - 10 G Ethernet
 - HDMI®
- Rugged, robust housing with non-reflective surface plating
- Submersible, watertight protection classes IP68 / IP69 / IP6K8 / IP6K9K
- Up to 5,000 mating cycles durability
- Break-Away for maximum safety
- Mechanical keying with color-coded visual indicator
- Contacts for solder cup and PCB termination

APPLICATIONS

- Tactical radios and accessories
- Ruggedized computers and tablets
- Power supply
- Unmanned systems
- Optical devices
- Software defined radios
- Defence and security systems

All shown connectors and cable assemblies are defined without breaking capacity (COC) according to IEC 61984:2008 (VDE 0627:2009). All shown connectors and cable assemblies are rated to a safety extra low voltage (SELV) of less than 50 V AC / 75 V DC, according to IEC 61140:2016 (VDE 0140-1:2016). For more details, please refer to page 54.

ODU AMC® High-Density is UL-listed under file E110586.

Data transmission protocols

These ODU specific connectors can transmit common data transmission protocols such as HDMI®, USB® 2.0 and USB® 3.2 Gen1x1, but they are not HDMI®- and USB®-standard connectors.

Printed on certified recycled paper.

A PERFECT ALLIANCE

ODU group overview

- Almost 80 years of experience in connector technology
- 2,300 employees worldwide
- Sales subsidiaries in China, Denmark, France, Germany, Hong Kong, Italy, Japan, Korea, Romania, Sweden, UK and the US as well as 5 production and logistics sites
- All technologies under one roof: Design and development, machine tooling and special machine construction, injection, stamping, turning, surface technology, assembly and cable assembly

As of February 2021

Certificates & approvals

- ISO 9001
- IATF 16949
- ISO 13485
- ISO 14001
- ISO 50001
- Wide range of UL, CSA, VG and VDE approvals
- UL Wiring Harnesses certified

For a complete list of our certifications and approvals, please visit our website.

Worldwide customer proximity

ODU serves the markets

PRODUCT PORTFOLIO

Circular Connectors

- Circular connector series in robust metal or plastic housing
- Different locking systems available: Push-Pull and Screw-Lock options or Break-Away for quick release
- Contacts for soldering, crimping and PCB termination
- 2 up to 55 contacts and protection classes IP50 to IP69
- Autoclavable for medical applications
- Hybrid inserts for combined transmission

Cable Assembly

- One point of contact for the complete solution
- State-of-the-art manufacturing facilities for small, medium and high volumes at production sites worldwide
- Overmolding in silicone, hot-melt and high-pressure procedures
- Customer-specific labeling and cable printing
- Wide range of standard cables and accessories available
- Rapid prototyping and fast customer samples

Electrical Contacts

- Versatile contact technologies with high reliability and durability
- Current-carrying capacity of up to 2,400 A
- Rugged and universal contact systems
- Stamping technology for customer-specific high volume solutions
- Very high vibration and low, stable contact resistance

Modular Connectors

- Application-specific hybrid interface
- Manual mating and automatic docking
- Flexible modular design and highest packing density
- High variety of locking options
- Mating cycles scalable as required from 10,000 to over 100,000 (1 million)
- Transmission of signals, power, high current, high voltage, HF signals (coax), media, high-speed data or fiber optics

Mass Interconnect Solutions

- For testing printed circuit boards (PCBs) and electronically assembled units
- Innovative engagement option: electromechanical version with remote control available
- 8 tensioning points stop the frame distortion
- Maximum flexibility with ODU-MAC® modules and signal blocks
- Adapter frame (ITA) with tolerance compensation
- Easy maintenance access for a simple and fast modification

ODU AMC® HIGH-DENSITY

ODU AMC® HIGH-DENSITY INTRODUCTION – A HIGHLY RELIABLE CONNECTOR SOLUTION

ODU AMC® High-Density is a rugged, ultra-miniature connector solution for extreme environments. Available in connector diameters as small as 7 mm, the ODU AMC® High-Density connector line proves that premium quality can also come in small packages.

In addition to discrete signal options, the product line includes versions for "Power" (up to 15 A) and "Data Transfer" (USB® 3.2 Gen 1×1, 5 A power) in compact, high-density configurations.

The ODU AMC® High-Density connector offers an impressively long service life of more than 5,000 mating cycles, even under challenging conditions. Intuitive mate and demate operation, and mechanical color keying aid operators and reduce user error.

The connector is available in two locking styles standard. Break-Away connectors can be easily disconnected by tugging on the cable, and are ideal whenever the cable is a potential snag hazard. Screw-Lock connectors remain connected despite environmental conditions, including tension on the cable, shock and vibration.

ODU AMC® HIGH-DENSITY

VARIOUS SIZES AND CONFIGURATIONS AVAILABLE

- Metal connector plug housing deliverable in 3 sizes
- Outer diameter 7 mm to 15 mm
- Number of contacts 2 to 27
- Inserts for high-speed data transmission
- International protection class IP68 / IP69
- Salt spray resistance
- Tested according to various MIL standards
- Mechanical and color keying
- Uniform distance from mounting flange to PCB, allows multiple connectors to be placed on the same board

MATERIALS AND APPLICABILITY

The ODU AMC® High-Density connector series uses PEEK as the insulator material. The housings are made of brass, and plated with ruthenium over nickel (See page 33 for more information). Operating temperature range: -51°C to +125 °C. This rugged and versatile connector series is ideal for defense & security applications as well as industrial electronics.

COMPLETE SYSTEM SOLUTION

Every connection has an unique cable requirement. Make no compromise when it comes to the quality of the complete inter-connect system. ODU gives you the complete system solution from one source, without the need for an intermediary supplier. Services include:

- 100% outgoing inspection
- ISO 14644-1:2015 clean room assembly available
- Factory-automated equipment and processes (cutting, stripping, etc.)
- Low- and high-pressure overmolding
- Ultrasonic welding
- EMI shielded enclosure assembly
- Custom labeling
- Various potting options for sealed systems
- Overmolded cable transitions (1-to-2, 1-to-3, etc.)

RELATED PRODUCTS IN THE ODU CIRCULAR CONNECTOR SERIES

- Signal, Power and high-speed data technology
- Secure Push-Pull locking and Break-Away function
- Contacts for solder and PCB termination
- International protection class IP6K9K

- Pogo pin contacts can be easily cleaned and are resilient against damage caused by dirt and debris ingress
- Break-Away function
- International protection class IP6K8 and IP6K9K

- High reliability for harsh environments
- Screw locking with "ratchet mechanism" half turn locking
- High vibration resistant
- International protection class IP6K8
- More mate cycles than MIL spec. connectors

- Circular Push-Pull connector with metal housing
- Wide variety of contact configurations and combinations
- International protection class IP50 and IP68

ODU AMC® HIGH-DENSITY LOCKING MECHANISMS

ODU offers you high-quality connectors and comprehensive service for the complete assembly. From connectors to submersible overmolded cable assemblies, we provide the complete system as an one-stop solution.

BREAK-AWAY FUNCTION

The Break-Away function allows connectors to be mated and unmated quickly and reliably. During the mating process, a locking ring inside the receptacle engages corresponding grooves on the plug. Once established, the connection will be maintained as long as axial tension on the plug is less than the release limit of the connector system. The retention mechanism is strong enough to resist minor tension. Pulling lightly on the plug or cable assembly will have no impact on the connection.

If the plug or cable assembly is pulled forcefully, and the release limit of the connector is exceeded the connectors will separate. Features in the connector allow the plug and receptacle to separate when the either the plug or the plug cable assembly is pulled avially away from the receptacle with enough force to overcome the retention mechanism.

SCREW-LOCK FUNCTION

Just like in the Break-Away connectors described above, during the mating process a locking ring inside the receptacle engages corresponding grooves on the plug. Once the connector is fully engaged, an operator can engage the secondary Screw-Lock mechanism by rotating the outer coupling sleeve. Once engaged, the connector will stay mated until the Screw-Lock mechanism is disengaged. Pulling on the plug connector or plug cable assembly will not cause the connector to separate.

SUMMARY ODU AMC® HIGH-DENSITY

The ODU AMC® High-Density is coded by pin and groove. These highly robust miniature connector series can be configured in many different ways: a variety of sizes, termination types and contact inserts are available.

- Keying over pin and groove
- 2 – 27 contacts / mixed inserts
- Up to 3 sizes and 2 termination types
- International protection class up to IP68 / IP69
- Up to 5,000 mating cycles
- Contacts for solder and PCB termination

FACTORY-TERMINATED FLEX ASSEMBLIES

TERMINATION PC-BOARDS

ODU AMC® High-Density device components can be supplied for direct attachment to the board or as rigid-flex-solution. The solder process is tested and suitable for all available inserts.

Size	Partnumber	AMC® High-Density Connector (Included)	Number of contacts	Connector keying	Suitable for

CUSTOM PARTS

40 POSITIONS / SIZE 1.5

- Ø 16.8 mm and a panel cut-out of Ø 14 mm
- Special cable assembly and potting needed

MINIATURE COAX CONNECTOR WITH SCREW LOCKING

- Cable assembly straight and right-angle
- Watertight

CUSTOMIZED LOW PROFILE SOLUTION

- Very small receptacle with chrome surface
- Plug with special customized design
- Very space saving overmolding and cable assembly
- Space saving 90° overmolding and cable assembly

ROBUST, MINIATURE, LOW SPACE

- Miniature connector
- Reduced outside dimension Ø 6.5 mm

ODU AMC® HIGH-DENSITY WITH CUSTOMIZED CABLE ASSEMBLY

- Space saving cable assembly and overmolding

- Space saving 90° cable assembly and overmolding
- Max. 6 positons

INTERNATIONAL PROTECTION CLASSES

ISO 20653:2013 (VDE 0470-1:2014-09)

Code letters [International Protection]		First code number [Degrees of protection against access to hazardous parts respectively against solid foreign objects]		Second code number [Degrees of protection against water]	
IP		6		5	
Code no.	Protection against access to hazardous parts / Protection against ingress of solid foreign objects		Code no.	Protection against harmful effects due to the ingress of water	
0	No protection	No protection against contact / No protection against solid foreign objects	0	No protection against water	No protection against water
1	Protection against contact with the back of hand [no protection against intentional contact]	Test probe with diameter 50 mm shall not penetrate completely and maintain sufficient distance from hazardous parts.	1	Protection against dripping water	Vertical drips shall not have any harmful effects or impair performance.
2	Protection against finger contact	Jointed test finger with diameter 12.5 mm may penetrate completely, but shall maintain a sufficient distance from hazardous parts.	2	Protection against dripping water (tilted)	Vertical drips shall not have any harmful effects or impair performance when the enclosure is tilted at any angle up to 15° on either side of the vertical
3	Protection against penetration of tools [e.g. screwdrivers]	Test probe with diameter 2.5 mm, may penetrate completely, but shall maintain a sufficient distance from hazardous parts.	3	Protection against spray water	Water spray at an angle up to 60° on either side of the vertical shall have no harmful effects or impair performance
4	Protection against granular foreign objects	Test probe with diameter 1.0 mm, may penetrate completely, but shall maintain a sufficient distance from hazardous parts	4	Protection against splashing water	Water which splashes against the enclosure from any direction shall not have any harmful effects or impair performance
			4K	Protection against splashing water with increased pressure	Water which splashes against the enclosure from any direction with increased pressure shall not have any harmful effects or impair performance
5K	Protection against dust	Dust shall only penetrate in quantities which do not impair performance and safety.	5	Protection against high-velocity water	Water which is directed against the enclosure from any direction as a jet shall not have any harmful effects or impair performance
			6	Protection against powerful water jet	Water which is directed against the enclosure from any direction as a strong jet shall not have any harmful effects or impair performance
6K	Protection against ingress of dust	Dust shall not penetrate	6K	Protection against strong high-velocity water with increased pressure	Water which is directed against the enclosure from any direction as a strong jet with increased pressure shall not have any harmful effects or impair performance
			7	Protection against the effects of temporary immersion in water	Water shall not penetrate in a quantity causing harmful effects or impair performance if the enclosure is immersed in water temporarily under specified pressure and time conditions
			8	Protection against the effects of continuous immersion in water	Water shall not penetrate in a quantity causing harmful effects if the enclosure is continuously immersed in water under conditions which shall be specified by the manufacturer
			9K	Protection against water during high-pressure/steam-jet cleaning	Water which is directed against the enclosure from any direction shall not have any harmful effects or impair performance

Source: ASTM

The American Wire Gauge (AWG) is based on the principle that the cross-section of the wire changes by 26% from one gauge number to the next. The AWG numbers decrease as the wire diameter increases, while the AWG numbers increase as the wire diameter decreases. This only applies to solid wire.

However, stranded wire is predominately used in practice. This has the advantage of a longer service life under bending and vibration as well as greater flexibility in comparison with solid wire.

Stranded wires are made of multiple, smaller-gauge wires (higher AWG number). The stranded wire then receives the AWG numbers of a solid wire with the next closest cross-section to that of the stranded wire. In this case, the cross-section of the stranded wire refers to the sum of the copper cross-sections of the individual wires.

Accordingly, strands with the same AWG number but different numbers of wires differ in cross-section. For instance, an AWG 20 strand of 7 AWG 28 wires has a cross-section of 0.563 mm², while an AWG 20 strand of 19 AWG 32 wires has a cross-section of 0.616 mm².

CURRENT LOAD OF TURNED CONTACTS

Nominal single contact current load for pin / slotted socket (nominal diameter 0.3 mm – 0.7 mm)

UPPER LIMIT TEMPERATURE OF STANDARD CONTACTS: +125 °C

The wire cross-section shown in the legend was connected as test cable. In the case of multi-position connectors and cables, the heating is greater than it is with individual contacts. For that reason, it is calculated with a reduction factor.

For connectors, the reduction factors for multi-core cables pursuant to DIN VDE 0298-4:2013-06 are applied. The reduction factor is factored in at 5 live wires and up.

DERATING CURVE

The corrected current-carrying capacity curve, derived from the base curve determined (0.8 × measured current). It factors in manufacturing tolerances as well as uncertainties in temperature measurement and measurement arrangement. See derating measurement method.

DERATING FACTOR

Number of loaded wires	Derating factor
5	0.75
7	0.65
10	0.55
14	0.5
19	0.45
24	0.4

EXPLANATIONS AND INFORMATION TO VOLTAGE RATINGS AND SAFETY REQUIREMENTS

OPERATING VOLTAGE (RATED VOLTAGE)

All shown connectors and cable assemblies are rated to a safety extra low voltage (SELV) of less than 50 V AC / 75 V DC, according to IEC 61140:2016 (VDE 0140-1:2016) Protection against electric shock – Common aspects for installation and equipment. In case other standards rule a specific use of the connectors and cable assemblies, the application specific safety criteria shall be considered first. In this context, lower voltage ratings may be valid.

If a higher operating voltage is needed, please refer to chapter “Voltage rating according EIA-364-20F:2019”.

VOLTAGE RATING ACCORDING EIA-364-20F:2019-02 (TEST VOLTAGE / WITHSTANDING VOLTAGE)

WARNING:

Danger to life for operating voltages above 50 V AC / 120 V DC! The subsequently explained procedure according EIA-364-20F:2019 does not consider protection against electric shock. Suitable precautions (protective measures) such as touch protection, protective insulation, protective separation, protective earth conductor etc. must be implemented.

In case other standards rule a specific use of the connectivity solutions, the application specific safety criteria shall be considered first. This must be evaluated by the customer during the equipment engineering process. For any advice on how the proper connectors and cable assemblies shall be chosen, please consult us and indicate the safety standard which your product has to meet.

EIA-364-20F:2019-02 „WITHSTANDING VOLTAGE – TEST PROCEDURE FOR ELECTRICAL CONNECTOR, SOCKETS AND COAXIAL CONTACTS”

The test voltage values in the catalog are determined according to EIA-364-20F:2019-02 method A, test condition I (sea level up to 2000 m) „Withstanding Voltage – Test Procedure for Electrical connectors, Sockets and Coaxial Contacts”.

The test voltage represents the physical limit of the connector and is usually set at 75 % of the break-down voltage. According to EIA-364-20F:2019-02 and former MIL-STD-1344 method 3001 it is specified to set the operating voltage (rated voltage) to ⅓ of the test voltage acc. to EIA-364-20F:2019-02.

Example:

Breakdown voltage	1000 V DC × 0.75 =
Test voltage	750 V DC × 0.33 =
operating voltage	250 V DC.

TECHNICAL TERMS

AMBIENT TEMPERATURE

Temperature of the air or other medium in which a piece of equipment is intended to be used in (IEC 44/709/CDV:2014 (VDE 0113-1:2014-10).

AWG

American Wire Gauge – see page 52

BASE CURVE

See page 53.
A current-carrying capacity curve metrologically determined according to the method described in IEC 60512-5-2:2002 (DIN EN 60512-5-2:2003-01) depending on the permissible limit temperature of the materials.

CHEMICAL RESISTANCE

Many secondary processing procedures use adhesives, cleaning agents or other chemicals on our products. Contact with unsuitable chemicals may have an adverse effect on the mechanical and electrical properties of the insulation and housing materials which specified properties may not be able to withstand. Please observe our processing suggestions and technical instructions in this catalog.

CLEARANCE DISTANCE

The shortest distance in the air between two conductive parts.

KEYING (ORIENTATION)

Arrangement with which differing polarization of otherwise identical connectors prevents interchangeability. This is a good idea if two or more identical connectors are attached to the same device (see also compatible connectors, see pages 33).

CONNECTORS

Also known as connectors without contact rating (COC): (IEC 61984:2008 (VDE 0627:2009-11). An element which enables electrical conductors to be connected and is intended to create and / or separate connections with a suitable counterpart.

CONTACT RESISTANCE

Total resistance value measured from terminal to terminal. In this case, the resistance is significantly lower than the contact resistance. The specifications are average values.

CONNECTORS WITHOUT BREAKING CAPACITY (COC)

Connectors which is not deemed to be engaged or disengaged in normal use when live or under load.

CORES

Electrical conductor, solid wire or multi-wire strand, with insulation as well as any conductive layers. Cables or leads may have one or more cores.

CREEPAGE DISTANCES

The shortest distance between two conductive parts along the surface of a solid insulation material. This factors in all elevations and recesses in the insulator, as long as defined minimum dimensions are on hand.

CRIMP BARREL

A terminal sleeve which can accommodate one or more conductor and be crimped by a crimping tool.

CRIMPING AREA

The specified area of the crimp barrel in which the crimp termination is executed by means of deforming or shaping the barrel under pressure around the conductor. See page 44.

DEGREE OF POLLUTION

The effect of pollution is factored in as degree of pollution when measuring clearance and creepage distances. Four degrees of pollution are defined for the micro-environment: IEC 60664-1:2020-05 (VDE 0110-1:2008-0).

DELIVERY FORM

Connectors can be delivered in assembled form or as individual parts.

DERATING CURVE

The corrected current-carrying capacity curve, derived from the base curve determined (0.8 × measured current). It factors in manufacturing tolerances as well as uncertainties in temperature measurement and measurement arrangement. See derating measurement method. See page 53.

DERATING MEASUREMENT METHOD IEC 60512-5-2:2002 (DIN EN 60512-5-2:2003-01)

Measurement method to determine the current carrying capacity of connectors in consideration of the maximum permissible limit temperature (see page 53).

FIXED CONNECTORS

Intended for mounting on a fixed surface such as a frame, dock, device or wall (with ODU also receptacle or panel mounted plug).

TECHNICAL TERMS

FREE CONNECTORS

Intended for mounting on free ends of mobile leads and cables (with ODU also connectors, plugs, in-line receptacles).

INSULATOR

Part of a connector which separates conductive parts with different potentials from one another; usually identical to the contact carrier.

LOWERMOST LIMIT TEMPERATURE

The lowest permissible temperature at which a connector may be operated.

MATING CYCLES

A mating cycle consists of one insertion and withdrawal action.

MAX. CONTINUOUS CURRENT

The metrologically determined amperage at room temperature (approx. 20 °C) which increases the contact temperature to the limit temperature. The values specified in the catalog apply to either individual contacts or completely assembled inserts / modules, as indicated.

NOMINAL SINGLE CONTACT CURRENT LOAD

The current-carrying capacity which each individual contact can be loaded with on its own (see page 53).

OPERATING TEMPERATURE FOR ODU AMC® HIGH-DENSITY

Range between the uppermost and lowermost temperature limits. –51 °C to +125 °C (see page 48).

PCB (A.K.A. “PRINTED CIRCUIT BOARD”)

A PCB is a carrier for electronic components. It serves the purposes of mechanical mounting and electrical connection.

PCB TERMINATION

Production of a conductive connection between the PCB and an element in through-hole assembly, THT (through-hole technology).

RATED VOLTAGE

The voltage which the manufacturer specifies for a connector and which the operating and performane features relate to.

REDUCTION FACTOR

According to VDE 0298-4:2013-06, with connectors and cables over 5 contacts, the heating is greater than it is with individual contacts. For that reason, the aforementioned standard is calculated with a reduction factor.

SOLDER CONNECTION (SOLDER TERMINATION)

Termination technology in which a molten additional metal (solder) with a lower melting point than the base materials to be connected is used to attach two metallic materials to one another.

TERMINATION CROSS-SECTION

The specified cross-sections correspond to a “fine-wire” conductor structure pursuant to IEC 60228:2004 (VDE 0295:2005-09; Class 5) or a “fine-wire” conductor structure (7/19 wire) according to AWG (ASTM B 258:2018).

TERMINATION TECHNOLOGIES

Methods for connecting the leads to the electro-mechanical element, such as solder-free connections pursuant to IEC 60352 (DIN EN 60352): crimp, screw connection etc. or soldering connection.

TEST VOLTAGE

The voltage which a conductor can withstand under defined conditions without dielectric breakdown or flashover.

TIGHTNESS ISO 20653:2013

See protection types on page 51.

UPPERMOST LIMIT TEMPERATURE

The maximum permissible temperature at which a connector may be operated. It includes contact heating through current-carrying capacity.

WIRE

Wires (solid conductors) are available with an insulator sleeve and / or electrical shielding. Cables or conductors may be made up of one or more wires.

TECHNICAL TERMS

GENERAL NOTE

The connectors listed in this catalog are intended for use in high voltage and frequency ranges. Suitable precautionary measures must be taken to ensure that people do not come into contact with live conductors during installation and operation. All entries in this catalog were thoroughly reviewed before printing. ODU reserves the right to make changes based on the current state of knowledge without prior notice without being obliged to provide replacement deliveries or refinements of older designs.
